

2023 – Learn JMeter By Examples

Session 9 – Regular Expression Extractor

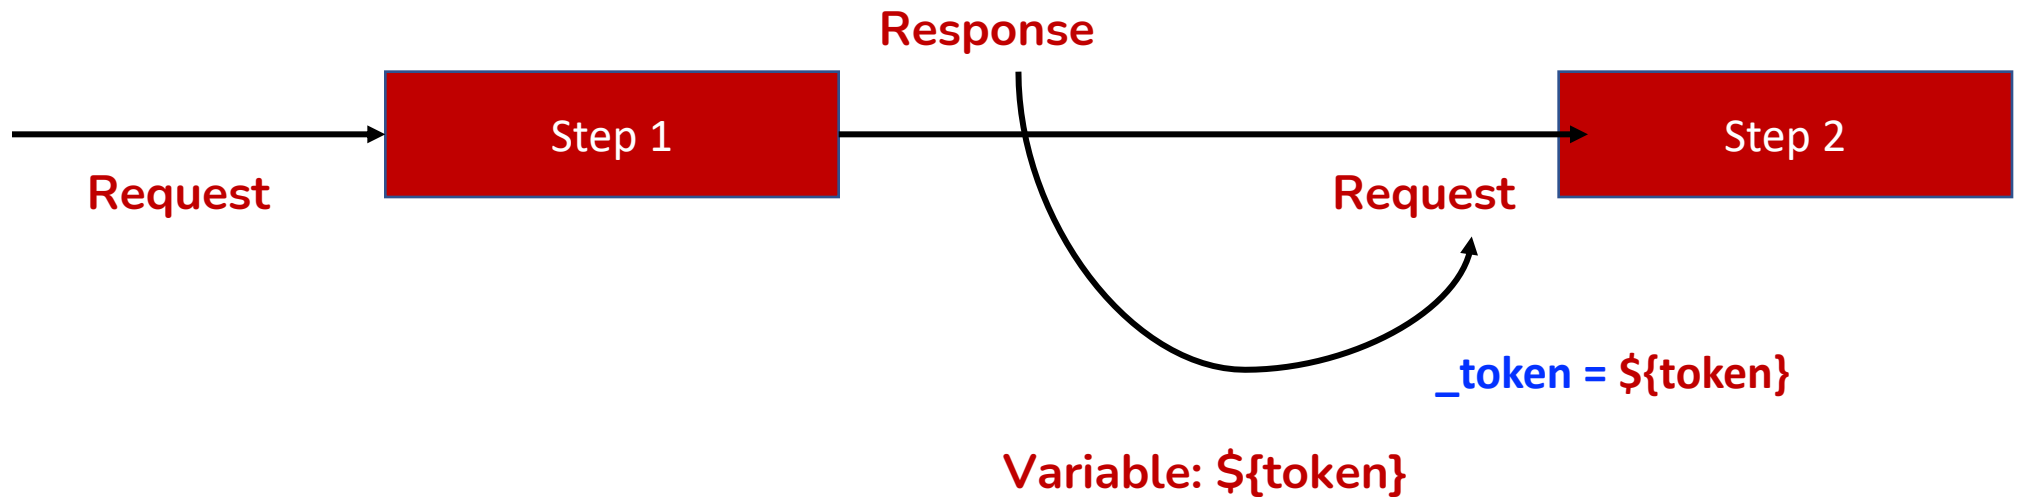

Daniel TEST LabCN @DanielLoveTEST

12th May 2023

Dynamic **_token**

Single Match

String to be matched:

```
<input type="text" name="author_name" value="Daniel TEST LabCN "><br>  
<input type="text" name="channel_name" value="@DanielLovePerf"><br>
```

Regular Expression Extractor:

Name of created variable:	single_name
Regular Expression:	value="(.*?)"
Template (\$i\$ where i is capturing group number, starts at 1):	\$1\$
Match No. (0 for Random):	1
Default Value:	not matched

Matched Value:

single_name: Daniel TEST LabCN

Multi Match

String to be matched:

```
<input type="text" name="author_name" value="Daniel TEST LabCN "><br>  
<input type="text" name="channel_name" value="@DanielLovePerf"><br>
```

Regular Expression Extractor:

Name of created variable:	multi_name
Regular Expression:	value="(.)+"
Template (\$i\$ where i is capturing group number, starts at 1):	\$1\$
Match No. (0 for Random):	-1
Default Value:	not matched

Matched Value:

```
multi_name_matchNr: 2  
multi_name_1: Daniel TEST LabCN  
multi_name_1_g0: value="Daniel TEST LabCN"  
multi_name_1_g1: Daniel TEST LabCN  
  
multi_name_2: @DanielLovePerf  
multi_name_2_g0: value="@DanielLovePerf"  
multi_name_2_g1: @DanielLovePerf
```

Notes:

- `_g` : The number of groups, ie regex within parenthesis.
- `_g0` : value of group 0 that contains the extracted value along with the boundaries.
- `_g1` : value of group 1, useful in case you have nothing specified in the template, or if you have several groups, but more on that later.

Group Match

String to be matched:

```
<input type="text" name="author_name" value="Daniel TEST LabCN "><br>
<input type="text" name="channel_name" value="@DanielLovePerf"><br>
```

Regular Expression Extractor:

Name of created variable:	group_example
Regular Expression:	name="(.+?)" value="(.+?)"
Template (\$i\$ where i is capturing group number, starts at 1:	\$1\$-\$2\$
Match No. (0 for Random):	-1
Default Value:	not matched

Notes:

- **_g0** : value of group 0 that contains the extracted value along with the boundaries.
- **_g1** : value of group 1, useful in case you have nothing specified in the template, or if you have several groups, but more on that later.

Matched Value:

group_example_matchNr: 2

group_example_1: **author_name-Daniel TEST LabCN**

group_example_1_g0: name="author_name" value="Daniel TEST LabCN"

group_example_1_g1: author_name

group_example_1_g2: Daniel TEST LabCN

group_example_2: **channel_name-@DanielLovePerf**

group_example_2_g0: name="channel_name" value="@DanielLovePerf"

group_example_2_g1: channel_name

group_example_2_g2: @DanielLovePerf
